PROFESSIONAL SUMMARY

Final-year BSc Cyber Security student with hands-on experience across offensive and detection engineering — from Active Directory attack simulation to building detection rules in Microsoft Sentinel. Strong foundation in system administration, DevOps, and scripting from a real production internship. Proficient in Linux (daily Arch Linux user), HTB Level 70. Eager to bring a Junior Penetration Testing or Graduate Cyber Security role hands-on, practical skill from day one.

PROFESSIONAL EXPERIENCE

System Administrator and DevOps Intern | Bitbox | Gran Canaria, Spain | *March 2025 – June 2025*

- Developed a web application integrating with Harbor API and Microsoft Teams webhooks to bypass Docker pull image limitation policies, significantly improving team workflow.
- Implemented Ansible across multiple company branches to automate configuration management and streamline deployments.
- Provided Level 1 and 2 IT support, consistently resolving Help Desk tickets, troubleshooting network issues, and managing system backups.
- Assisted the infrastructure team in preparing and executing production deployments.

EDUCATION

- **BSc (Hons) Cyber Security (Top-up)** | York St John University | York, UK | *Sep 2025 – June 2026*
- **Advanced Vocational Training in Network Computer Systems Administration** | ICSE | Gran Canaria, Spain | *Sep 2023 – May 2025*

PROJECTS

- **AD Purple Team Lab (Dissertation):** Built a full purple-team lifecycle in an isolated Active Directory environment — simulated MITRE ATT&CK-aligned attack techniques, engineered detection rules in Microsoft Sentinel (KQL), instrumented endpoint visibility with Sysmon, and automated incident triage via SOAR (Azure Logic Apps + AI).
- **Hybrid Offensive Security Homelab:** Architected a professional-grade simulation environment on Arch Linux using KVM/QEMU — dual-homed Kali Linux pivot, isolated corporate network with Active Directory (Windows Server 2022), Dockerized web vectors, and a physical Raspberry Pi 4 acting as C2 redirector.
- **Offensive Tooling – Python Keylogger:** Built a keylogger and HTTP/S exfiltration channel as adversary-simulation practice in an isolated homelab, to study endpoint evasion from an attacker's perspective.

TECHNICAL SKILLS

- **Security & Networking:** Penetration Testing, Vulnerability Assessment, Active Directory Attacks, MITRE ATT&CK, Microsoft Sentinel, SOAR, Nmap, Metasploit, Burp Suite, Wireshark, OWASP Top 10, Cisco routing/switching, IoT, Cloud Computing Security and Compliance, Network Security Architecture and Operations.
- **Systems & DevOps:** Linux (Arch, Debian, Ubuntu, Kali), Windows, Docker, Ansible, AWS (S3), Azure, VM's, Raspberry OS.
- **Programming & Scripting:** Bash, Python, JavaScript, C++, Git/GitHub.
- **Languages:** Native Spanish and Chinese, Fluent English.

CERTIFICATIONS

- [IT Specialist - Cybersecurity \(Pearson\)](#)
- [Cisco Certified Support Technician Cybersecurity \(CCST Cybersecurity\)](#)
- HTB CPTS – Certified Penetration Testing Specialist (exam completed, results pending)

PRACTICE & CTFS

- [HackTheBox — Level 70](#)
- [Entry Stage of the WorldSkills UK 2026 Cyber Security competition](#): Successfully passing that stage but couldn't attend the next stage, skills covered Linux CLI, OSINT, network traffic analysis (PCAP/Wireshark), and security theory — strongest results in theory, OSINT, Linux CLI.
- [Hackathon Project: Hack27](#) (Rolls-Royce, hosted by Projecting Success): Secured the AI/data pipeline of an automated document-processing tool — data sanitization before LLM ingestion and a local, offline LLM deployment to eliminate data leakage risk.
